

CB2A - Cartes Bancaires Account Updater MDC

Scenario Cartes Bancaires Account Update

Cartes Bancaires Account Updater (short MDC) is a service provided by Cartes Bancaires (CB) which allows to request some credit card data. CB will check for updates and sends updated credit card data back in response.

To ease usage of MDC and to make it PCI DSS compliant Computop Paygate will translate [Pseudo Card Numbers \(PCNr\)](#) into credit card numbers before sending to MDC and will create new [PCNr](#) for updated cards before sending response back to you.

MDC / Computop Paygate allow you to send multiple cards in request and will send a record back in response for each card you've sent.

 Your Merchant configuration needs to be enrolled to the Cartes Bancaires Account Updater (short MDC) by [Computop Helpdesk](#)

 Card updates can be only sent back if the merchant has already a Card-on-file with expired card - not all cards.

 You may send in real card numbers (pay attention to your [PCI DSS](#) certification) or Pseudo Card Numbers (PCNr) which are not PCI DSS relevant.

 Maximum number of cards in request / response is limited to 10.000 cards.
