

Customizable Confirmation Page

- [Introduction](#)
- [Possible configurations](#)
- [Samples – Template "ct_confirmation"](#)
 - [Successful payment – with redirect link](#)
 - [Failed payment – with redirect link](#)
 - [Failed payment – without redirect link](#)
- [Sourcecode – Template "ct_confirmation"](#)

Introduction

Paygate now can handle a confirmation page after the payment has been completed.

Normally the consumer is redirected:

- either to [UrlSuccess](#) – in case payment has been completed successfully
- or to [UrlFailure](#) – in case payment has failed

These are URLs located at the merchants system.

Now your merchant configuration can be set to have a confirmation page hosted by Paygate. Please contact [Computop Helpdesk](#) to setup your merchant configuration.

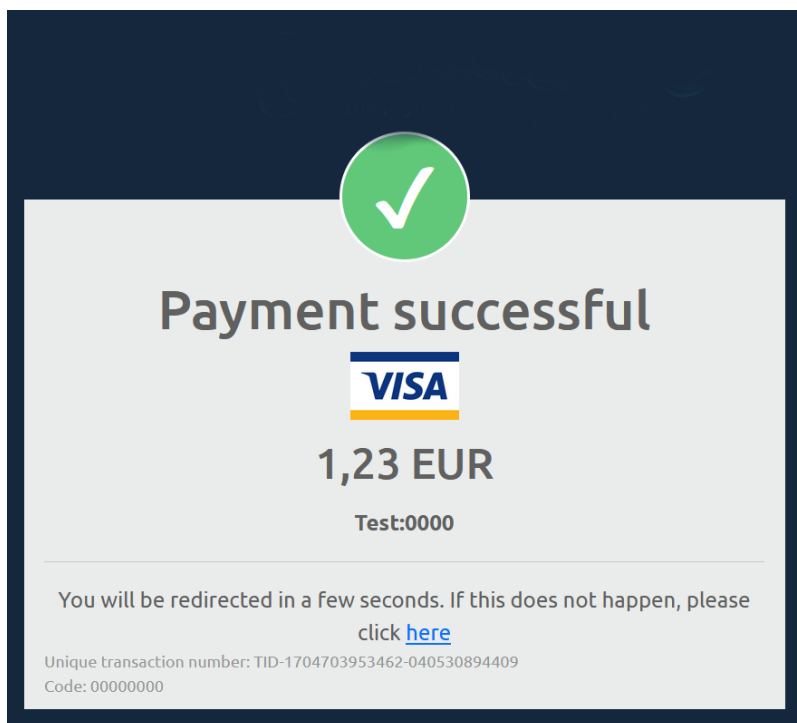

The template for this confirmation page can be customized by you. A sample template will be available soon.

Possible configurations

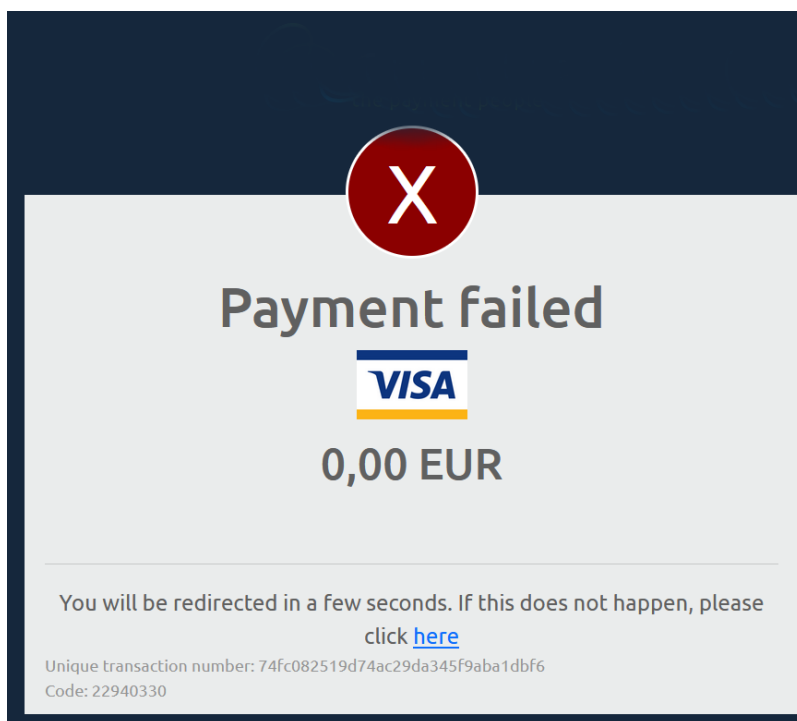

- No confirmation page active on Paygate (default)
 - Consumer is forwarded directly to your [UrlSuccess](#) / [UrlFailure](#)
- Confirmation page without redirect
 - Consumer is forwarded to Paygate Confirmation page after payment
 - No further redirect possible
- Confirmation page with automatic redirect
 - Consumer is forwarded to Paygate Confirmation page after payment
 - And is automatically forwarded to [UrlSuccess](#) / [UrlFailure](#) after a given time
 - Note: Template needs to handle forwarding
- Confirmation page with manual redirect
 - Consumer is forwarded to Paygate Confirmation page after payment
 - And is not forwarded automatically to [UrlSuccess](#) / [UrlFailure](#), but consumer can click a link to get redirected
 - Note: Template needs to handle forwarding

Samples – Template "ct_confirmation"

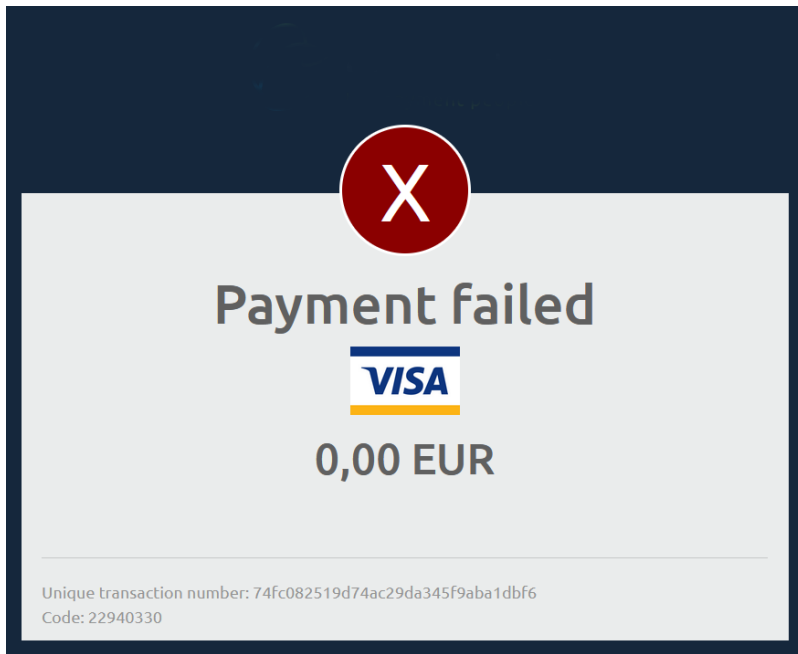

Successful payment – with redirect link

Failed payment – with redirect link

Failed payment – without redirect link

Sourcecode – Template "ct_confirmation"

- A template with source code for your own customization will be available soon.
