

Searching for and filtering operations

Searching for and filtering operations

You can use the "View operations Operations" tab to search for and filter operations. It allows you to set filters for the time period, the operation characteristics, and the characteristics of payment. Moreover, you can open a detailed view of an operation, and add other actions to the operation. You can export the search results as an Excel file.

Overview of the search criteria

1. "Period" selection field
2. "Operation characteristics" selection field
3. "Characteristics of payment" selection field
4. "Search and Filter" button

Activating the "Period" selection field

When you click in the input fields for the date, a calendar opens in which you can select a date. When you click in the input fields for the time, you can define a time for the search.

Activating the "Operation characteristics" selection field

Operation characteristics describe the type of operation, along with its associated status. You can set two different operation characteristics: Specific details and Status.

Selecting specific details

Descriptions of the specific details can be found in the "Specific details" table below.

"Detail" input field

The "Detail" input field next to the "No specific detail" drop-down menu allows you to narrow the search to a character string (card number, error code, etc.). The character string that is entered depends on the specific detail selected in the "No specific detail" drop-down menu.

Operation characteristics	No specific detail No specific detail Payment-ID Card number
Characteristics of Payment	Pseudo card number Account number IBAN Merchant reference number Merchant reference number (partial search) Reference number Reference number (partial search) Error code

Application Button

The button at the bottom allows you to jump to the corresponding page within the application. You must be logged in to jump to the corresponding page within the application.

Specific detail	Description
Operation number	The operation number (also "PayID") is an unique operation code automatically assigned by Computop Paygate
Card number	The card number is the number on the credit card that has been used for an operation
Pseudo card number (PCNr)	The pseudo card number (PCNr) is an adequate substitute for the card number. The pseudo card number (PCNr) can be saved and used by merchants without a PCI certification so that customers do not have to enter card data over and over again.
Account number	The account number is a number valid within a given country and is used to identify a bank account
IBAN	An IBAN is a standardised international bank account number and is used to identify a bank account. The IBAN is comprised of the country code (DE for Germany), the bank code, the previous account number, and the two-digit verification code.
Merchant reference number	The merchant reference number is a merchant code assigned by you to identify an operation
Merchant reference number (partial search)	Selecting "Merchant reference number (partial search)" allows a search for parts of the merchant reference number
Reference number	The reference number is a code automatically assigned to every payment transaction by Computop Paygate
Reference number (partial search)	Selecting "Reference number (partial search)" allows a search to be made for parts of the reference number
Error code	The error code is a code assigned by Computop Paygate that provides information about the exact type of Paygate error. An overview of the error codes can be found here .

Selecting the status

Descriptions of the statuses can be found in the "Status" table below.

All results

All results

OK

- Process

- Successful Authorization

OPEN

- 3-D Secure Authentication not completed

- Process initiated

- Process not completed

- Authorization successful, Capture is outstanding

- Authorization successful, scheduled Capture is outstanding

- Authorization and Capture successful, Credit is outstanding

- Authorization successful, Capture is outstanding

NOT OK

- Operation failed

- Operation canceled

Status	Description
--------	-------------

OK	The status of the operation is "OK". The operation has been completed.
Process successful	The status of the operation is "OK". The operation was successful.
Successful authorisation	The status of the operation is "OK". The authorisation of the operation was successful.
OPEN	The status of the operation is "OPEN". The operation has not been completed yet.
3-D Secure authentication not completed by customer	The status of the operation is "OPEN". The 3-D Secure authentication of the operation has not been completed by the customer yet.
Process initiated	The status of the operation is "OPEN". The operation has been initiated.
Process not completed	The status of the operation is "OPEN". The operation has been initiated, but has not been completed yet.
Authorisation successful, capture is outstanding	The status of the operation is "OPEN". The operation has been authorised and been posted, but is still outstanding.
Authorisation successful, scheduled capture is outstanding	The status of the operation is "OPEN". The operation has been authorised and posting has been scheduled, but is still outstanding.
Authorisation and capture successful, credit is outstanding	The status of the operation is "OPEN". The operation has been authorised, the posting completed and the credit submitted, but is still outstanding.
NOT OK	The status of the operation is "NOT OK". The operation has not been completed.
Operation failed	The status of the operation is "NOT OK". The operation was not successful.
Operation cancelled	The status of the operation is "NOT OK". The operation was cancelled.

Activating the "Characteristics of payment" selection field

Characteristics of payment describe the payment method used for an operation, along with the associated currency and total. You can set three different characteristics of payment: Payment method, currency and amount.

Selecting the payment method or payment service provider

You can either search for all credit cards, or select a payment service provider. The "All payment types" drop-down menu shows you all payment methods that have been enabled for you in Computop Paygate. Individual payment service providers appear under the respective main categories in the list. A description of the main categories can be found in the "All payment methods" table below.

CARD

CARD (3-D SECURE)

BANCONTACT

DEBITORS MANAGEMENT

DIRECT DEBIT

EWALLET

INVOICE & INSTALLMENTS

ONLINE BANK TRANSFER

PREPAID

RISK MANAGEMENT

^

All payment types

▼

Status	Description
CARD	All payment service providers that support credit cards
CARD (3-D SECURE)	All payment service providers that support credit cards with 3-D Secure authentication
BANCONTACT	All payment service providers that support Bancontact
DEBTOR MANAGEMENT	All payment service providers that support debtor management
DIRECT DEBIT	All payment service providers that support direct debit
EWALLET	All payment service providers that support online wallets
INVOICE & INSTALMENTS	All payment service providers that support purchase on invoice and hire-purchase
ONLINE BANK TRANSFER	All payment service providers that support online bank transfers
PREPAID	All payment service providers that support prepaid cards
RISK MANAGEMENT	All service providers that support risk management

Information about the individual paymethods

More information about the individual paymethods can be found here: [Paymethods](#).

Selecting currency and amount

When you open the "All currencies" drop-down menu, you will see all currencies that can be selected. You can narrow the search to a specific amount of money in the "Amount" input field.

"Amount" input field

You can enter an amount in the "Amount" input field next to the "All currencies" drop-down menu. The amount entered depends on the currency selected from the "All currencies" drop-down menu beforehand. The amount is specified with decimals (e.g. 10.50 €) of the selected currency. However, it depends on the currency whether decimals are allowed or not.

Exporting search results

You can export the search results as an Excel file for further processing.

Proceed as follows to export the search results:

1. Activate values in the selection fields.
2. Click on the "Search and Filter" button.

The application verifies the values entered. If the values are invalid, a message showing the reason why will appear in red. If the values are valid, the search results will be shown.

The screenshot shows the application's search interface. At the top, there are tabs for 'Operations', 'Transactions', 'Accounts', 'Statements', 'Partners', and 'Reports'. Below these, there's a 'Search and Filter' section with various input fields for date ranges, operation characteristics, and payment types. A 'Search and Filter' button is at the bottom right of this section. Below the search filters, there's a table of operations. The table has columns for 'Operation Date', 'Merchant', 'Merchant reference number', 'Reference number', 'Type of Transaction', 'Status', 'Currency', 'Amount Authorization', 'Amount Capture', and 'Amount Refund'. The table contains several rows of data, with some rows highlighted. A '1' in a blue circle is placed next to the 'Merchant reference number' column header.

1. "Export" button

3. Click on the "Export" button.

The search results are issued as a CSV file ready to download.

Opening the detailed view of an operation

You can open a detailed view for every operation in the search results. More information about the customer and operation data are shown to you in the detailed view. Moreover, you can [add other actions to the operation](#) in the detailed view, such as postings or credits. If an operation was processed using card, account or device data, you can [disable these in the detailed view](#). If you wish to enable the card, account or device data again, you must remove the credit card from the [negative list](#).

Proceed as follows to open the detailed view of an operation:

1. Activate values in the selection fields.
2. Click on the "Search and Filter" button.

The application verifies the values entered. If the values are invalid, a message showing the reason why will appear in red. If the values are valid, the search results will be shown.

The screenshot shows the application's search interface, similar to the previous one. However, a detailed view of an operation is now open. The detailed view shows a table with columns for 'Merchant reference number', 'Reference number', 'Type of Transaction', 'Status', 'Currency', 'Amount Authorization', 'Amount Capture', and 'Amount Refund'. The table contains several rows of data, with some rows highlighted. A '1' in a blue circle is placed next to the 'Merchant reference number' column header, and a '2' in a blue circle is placed next to the 'Reference number' column header.

1. "Merchant reference number" column
2. "Merchant reference number" of an operation

3. Click on the merchant reference number for the required operation in the "Merchant reference number" column.

The detailed view of the operation opens.

The detailed view of the operation is divided into fields with the customer and operation data, along with data about postings. If you check the country of origin of the card for purposes of fraud prevention, you will also find the country of origin of the credit card here. Moreover, you can [add other actions to the operation](#) in the detailed view.

Detailed view of operation

Select action
Execute action

This transaction was carried out in simulation mode.

Point in time	Action	Status	Code	Currency	Amount
04/11/2020 15:14:53	AUTHORIZE	Transaction completed	00000000	CAD	100.00
04/11/2020 15:16:53	CAPTURE	Transaction completed	00000000	CAD	100.00

Details on Action and Status

Each payment process (operation) can include one or more actions. Each action has a status, e.g. indicating success / failure of this status.

The actions may vary on your implementation and the payment method involved.

Pls. find a list of most common combinations and their meaning here:

Action	Paymethod (samples)	Description								
ORDER	Credit card PayPal	Action "order" indicates that a payment has been initiated, but not yet authorized.								
		<table><tr><th>Status</th><th>Description</th></tr><tr><td>Transaction completed</td><td>The "order" was initiated successfully</td></tr><tr><td>Request</td><td>The "order" has been initiated, but not completed</td></tr><tr><td>Other</td><td> The "Order" failed, e.g.: - Transaction aborted by user Transaction has been stopped by consumer. - Transaction declined The transaction has been declined by provider. - Timeout The consumer did not complete transaction. </td></tr></table>	Status	Description	Transaction completed	The "order" was initiated successfully	Request	The "order" has been initiated, but not completed	Other	The "Order" failed, e.g.: - Transaction aborted by user Transaction has been stopped by consumer. - Transaction declined The transaction has been declined by provider. - Timeout The consumer did not complete transaction.
Status	Description									
Transaction completed	The "order" was initiated successfully									
Request	The "order" has been initiated, but not completed									
Other	The "Order" failed, e.g.: - Transaction aborted by user Transaction has been stopped by consumer. - Transaction declined The transaction has been declined by provider. - Timeout The consumer did not complete transaction.									

ACCOUNT_VERIFICATION	Credit card	Account-Verification is used with credit cards to check whether this credit card is existing. Technically an authorization with "amount=0" is done, so no money is reserved on the card holders account.								
		<table><tr><th>Status</th><th>Description</th></tr><tr><td>Transaction completed</td><td>The transaction has been completed successfully.</td></tr><tr><td>Other</td><td>The credit card could not be verified, e.g.: Invalid card number credit card number is not valid. </td></tr></table>	Status	Description	Transaction completed	The transaction has been completed successfully.	Other	The credit card could not be verified, e.g.: Invalid card number credit card number is not valid.		
		Status	Description							
		Transaction completed	The transaction has been completed successfully.							
Other	The credit card could not be verified, e.g.: Invalid card number credit card number is not valid.									
AUTHENTICATE	Credit card	Authenticate happens with 3-D Secure and means that the card holder has to identify (authenticate) himself. After successful authentication an authorization may be initiated to reserve the money on the card holders account.								
		<table><tr><th>Status</th><th>Description</th></tr><tr><td>REQUEST</td><td>Authentication process has been initiated, but not yet completed.</td></tr><tr><td>Authentication completed</td><td>The card holder proofed his/her identity towards the issuer.</td></tr><tr><td>Other</td><td>The "Authentication" failed, e.g.: - Authentication failed The card holder wasn't able to authenticate successfully, so the authentication failed. - Connection timed out The card holder did not complete the authentication. - Cardholder not enrolled Card holder is not enrolled to 3-D Secure system. - RRes receive timeout Technical time out receiving 3-D Secure response. </td></tr></table>	Status	Description	REQUEST	Authentication process has been initiated, but not yet completed.	Authentication completed	The card holder proofed his/her identity towards the issuer.	Other	The "Authentication" failed, e.g.: - Authentication failed The card holder wasn't able to authenticate successfully, so the authentication failed. - Connection timed out The card holder did not complete the authentication. - Cardholder not enrolled Card holder is not enrolled to 3-D Secure system. - RRes receive timeout Technical time out receiving 3-D Secure response.
		Status	Description							
		REQUEST	Authentication process has been initiated, but not yet completed.							
Authentication completed	The card holder proofed his/her identity towards the issuer.									
Other	The "Authentication" failed, e.g.: - Authentication failed The card holder wasn't able to authenticate successfully, so the authentication failed. - Connection timed out The card holder did not complete the authentication. - Cardholder not enrolled Card holder is not enrolled to 3-D Secure system. - RRes receive timeout Technical time out receiving 3-D Secure response.									
AUTHORIZE	Credit card PayPal Direct Debit Paydirekt	The authorization checks the card holders account and reserves the money for a given period of time.								
		<table><tr><th>Status</th><th>Description</th></tr><tr><td>Transaction completed</td><td>The authorization was successful, the amount is reserved on the card holders account and can finally be captured (i. e. transferred).</td></tr><tr><td>Other</td><td>The "Authorization" has been declined, e.g.: - Authorization declined issuer/acquirer declined authorization. - Invalid card number card number is wrong. - Shipping country and the card's country of origin do not match risk setting prevents authorization. </td></tr></table>	Status	Description	Transaction completed	The authorization was successful, the amount is reserved on the card holders account and can finally be captured (i. e. transferred).	Other	The "Authorization" has been declined, e.g.: - Authorization declined issuer/acquirer declined authorization. - Invalid card number card number is wrong. - Shipping country and the card's country of origin do not match risk setting prevents authorization.		
		Status	Description							
		Transaction completed	The authorization was successful, the amount is reserved on the card holders account and can finally be captured (i. e. transferred).							
Other	The "Authorization" has been declined, e.g.: - Authorization declined issuer/acquirer declined authorization. - Invalid card number card number is wrong. - Shipping country and the card's country of origin do not match risk setting prevents authorization.									
REVERSEAUTHORIZE		The authorization should be reversed and the money should not be reserved on the card holders account any more.								
		<table><tr><th>Status</th><th>Description</th></tr><tr><td>Transaction completed</td><td>The authorized amount has been released successfully.</td></tr><tr><td>Other</td><td>The "Reverse-Authorization" failed, e.g.: Referenced transaction not found </td></tr></table>	Status	Description	Transaction completed	The authorized amount has been released successfully.	Other	The "Reverse-Authorization" failed, e.g.: Referenced transaction not found		
		Status	Description							
		Transaction completed	The authorized amount has been released successfully.							
Other	The "Reverse-Authorization" failed, e.g.: Referenced transaction not found									

CAPTURE	Credit card	"Capture" means that money should be transferred from the customer /card holder to the acquirer (and finally to the merchant). Depending on the payment method and connection a capture can be done one time only or multiple times. <table><tr><th>Status</th><th>Description</th></tr><tr><td>Request</td><td> The "capture" (i.e. transfer) of the money has been initiated and is waiting for its processing "capture" is pending. This can be either processed online (i.e. in realtime) or offline (file based - and then normally within 24 hours) - depending on the payment method and downstream processing. </td></tr><tr><td>Transaction completed</td><td> The "capture" has been processed, i.e.: transmitted to the acquirer and further to the issuer. </td></tr><tr><td>Other</td><td> The "Capture" failed, e.g.: Declined by issuer issuer/acquirer declined authorization. </td></tr></table>	Status	Description	Request	The "capture" (i.e. transfer) of the money has been initiated and is waiting for its processing "capture" is pending. This can be either processed online (i.e. in realtime) or offline (file based - and then normally within 24 hours) - depending on the payment method and downstream processing.	Transaction completed	The "capture" has been processed, i.e.: transmitted to the acquirer and further to the issuer.	Other	The "Capture" failed, e.g.: Declined by issuer issuer/acquirer declined authorization.
	Status		Description							
	Request		The "capture" (i.e. transfer) of the money has been initiated and is waiting for its processing "capture" is pending. This can be either processed online (i.e. in realtime) or offline (file based - and then normally within 24 hours) - depending on the payment method and downstream processing.							
	Transaction completed		The "capture" has been processed, i.e.: transmitted to the acquirer and further to the issuer.							
	Other		The "Capture" failed, e.g.: Declined by issuer issuer/acquirer declined authorization.							
PayPal										
Direct Debit										
Paydirekt										
CREDIT	Credit card	"Credit" means the money should be refunded to the customer. Depending on the payment method and connection a refund can be done one time only or multiple times. <table><tr><th>Status</th><th>Description</th></tr><tr><td>Request</td><td> The "credit" (i.e. refund) of the money has been initiated and is waiting for its processing. This can be either processed online (i.e. in realtime) or offline (file based - and then normally within 24 hours) - depending on the payment method and downstream processing. </td></tr><tr><td>Transaction completed</td><td> The "credit" has been processed, i.e.: transmitted to the acquirer and further to the issuer. </td></tr><tr><td>Other</td><td> The "Credit" failed, e.g.: Amount too high total amount for "credit" is higher than the amount "captured" so far. </td></tr></table>	Status	Description	Request	The "credit" (i.e. refund) of the money has been initiated and is waiting for its processing. This can be either processed online (i.e. in realtime) or offline (file based - and then normally within 24 hours) - depending on the payment method and downstream processing.	Transaction completed	The "credit" has been processed, i.e.: transmitted to the acquirer and further to the issuer.	Other	The "Credit" failed, e.g.: Amount too high total amount for "credit" is higher than the amount "captured" so far.
	Status		Description							
	Request		The "credit" (i.e. refund) of the money has been initiated and is waiting for its processing. This can be either processed online (i.e. in realtime) or offline (file based - and then normally within 24 hours) - depending on the payment method and downstream processing.							
	Transaction completed		The "credit" has been processed, i.e.: transmitted to the acquirer and further to the issuer.							
	Other		The "Credit" failed, e.g.: Amount too high total amount for "credit" is higher than the amount "captured" so far.							
PayPal										
Direct Debit										
Paydirekt										
Sofort										
SALE	Credit card	"Sale" is a combination of "authorization" and "capture". <table><tr><th>Status</th><th>Description</th></tr><tr><td>Transaction completed</td><td> The "sale" has been processed, i.e.: transmitted to the acquirer. </td></tr><tr><td>Other</td><td> The "Sale" has been rejected, e.g.: - Timeout The consumer did not complete the transaction. - Declined by the issuer The issuer declined transaction. </td></tr></table>	Status	Description	Transaction completed	The "sale" has been processed, i.e.: transmitted to the acquirer.	Other	The "Sale" has been rejected, e.g.: - Timeout The consumer did not complete the transaction. - Declined by the issuer The issuer declined transaction.		
	Status		Description							
	Transaction completed		The "sale" has been processed, i.e.: transmitted to the acquirer.							
	Other		The "Sale" has been rejected, e.g.: - Timeout The consumer did not complete the transaction. - Declined by the issuer The issuer declined transaction.							
	PayPal									
Paydirekt										
Sofort										

Details on 3-D Secure transactions

For payments which are authenticated with 3-D Secure you may see details like this:

3-D secure	
ECI value	02
3-D Version (Directory Server)	2.1.0 - 2.2.0
3-D Version (Processing)	2.1.0
Authentication Type	00
Challenge Indicator (Requested)	01
Transaction Status	Y
Whitelist Status	E

The values shown above depend on 3-D Secure version used for authentication and the card scheme.

Here are some details:

ECI value

The ECI value stands for "Electronic Commerce Indicator" and detailed overview can be found here: [ECI Codes](#).

3-D Version (Directory Server)

The Directory Server is managed by the card scheme (Mastercard, VISA, American Express, ...) where each credit card issuer is registered and can be identified by the BIN (Bank Identification Number).

The Directory Server "talks" to the Access Control Server which finally refers to the credit card issuer system.

For 3-D Secure processing all parties (scheme, issuer and PSP Computop) have to agree on the same 3-D Secure version.

3-D Version (Processing)

This is the 3-D Secure version which has been agreed by all parties finally for 3-D Secure authentication.

It may happen that a specific issuer is not supporting 3-D Secure (Version 2.1.0, 2.2.0) by now and then automatically a fallback to Version 1.0 will happen.

Authentication Type

Current supported values for "authentication type" are:

Value	Meaning	Description
00	Frictionless	Issuer did not challenge for card holder authentication.
01	Static	Static password is used for card holder authentication. Also used for 3DS1 non frictionless
02	Dynamic	Dynamic password (e.g. token or app) is used for card holder authentication.
03	OOB	OOB stands for "Out Of Band": Users verify transactions in their issuer's authentication service which can be on the issuer's website or issuer's app.
04	Decoupled	Will be supported with 3-D Secure 2.2, intended to support card holder authentication for merchant initiated transactions (MIT).

Authentication Method

Current supported values for "authentication method" are:

Value	Meaning	Description
01	Static Passcode	Static password is used for card holder authentication. Also used for 3DS1 non frictionless
02	SMS OTP	Dynamic password (OTP = One Time Password) provided by SMS is used for card holder authentication.

03	Key fob or EMV card reader OTP	Dynamic password (OTP = One Time Password) provided by Key Fob or EMV card reader is used for card holder authentication.
04	App OTP	Dynamic password (OTP = One Time Password) provided by Application is used for card holder authentication.
05	OTP Other	Dynamic password (OTP = One Time Password) provided by "other" is used for card holder authentication.
06	KBA	Knowledge Based Authentication
07	OOB Biometrics	Users verify transactions in their issuer's authentication service based on Biometrics.
08	OOB Login	Users verify transactions in their issuer's authentication service based on Login.
09	OOB Other	Users verify transactions in their issuer's authentication service based on other methods.
10	Other	
11	Push Confirmation	Authenticates by pushing a push notification to a secure application on the user's device.
12	Decoupled	Authentication without being the cardholder in session
13	WebAuthn	WebAuthn / FIDO
14	SPC	Secure Payment Confirmation, Authentication is handled using a platform authenticator, e.g. Touch ID on a macOS device, Hello on a Windows device
15	Behavioural biometrics	Authenticates users based on patterns in their behavior, e.g. how people type or move.

Challenge Indicator (Requested)

Value	Meaning	Description
01	No preference	No specific challenge indicator requested, default value.
02	No challenge requested	Merchant prefers that no challenge should be performed
03	Challenge requested: 3DS Requestor Preference	Merchant prefers that a challenge should be performed
04	Challenge requested:Mandate	There are local or regional mandates that mean that a challenge must be performed
05	No challenge requested	Transactional risk analysis is already performed
06	No challenge requested	Data share only
07	No challenge requested	Strong consumer authentication is already performed
08	No challenge requested	Utilise whitelist exemption if no challenge required
09	Challenge requested	Whitelist prompt requested if challenge required

Transaction Status

Value	Meaning	Description
Y	Authentication Verification Successful	Authentication has been completed successfully, i.e. ready for authorisation. It still may happen that the authorisation fails, e.g. due to low account balance.
N	Not Authenticated /Account Not Verified	Transaction denied

U	Authentication/ Account Verification Could Not Be Performed	Technical or other problem, as indicated in ARes or RReq
A	Attempts Processing Performed	Not Authenticated/Verified, but a proof of attempted authentication/verification is provided.
C	Challenge Required	Additional authentication is required using the CReq /CRes.
D	Challenge Required	Decoupled Authentication confirmed.
R	Authentication/ Account Verification Rejected	Issuer is rejecting authentication/verification and request that authorisation not be attempted.
I	Informational Only	3DS Requestor (merchant) challenge preference acknowledged.

Whitelist Status

Value	Meaning
Y	3DS Requestor (merchant) is whitelisted by cardholder
N	3DS Requestor (merchant) is not whitelisted by cardholder
E	Not eligible as determined by issuer
P	Pending confirmation by cardholder
R	Cardholder rejected
U	Whitelist status unknown, unavailable, or does not apply
