

Entering a credit card payment in the card terminal

The "Create processes" "Card terminal" tab allows you to create an operation (credit card payment). It gives you the option of initiating a credit or a payment for the credit card entered. Only one operation can be created using this method. If you wish to create several operations, you can use a [batch file](#) to do so.

Overview of the card terminal

The screenshot shows the 'Card terminal' interface with the following sections:

- Operation characteristics:** Currency (dropdown), Amount (text field), Type of capture (dropdown), Reference number (text field), Merchant reference number (text field), Information of Shopping Cart (text field).
- Card data:** Card holder (text field), Card brand (dropdown), Card number (text field), Expiry date (MM/YYYY) (dropdowns for month and year), Card verification code (text field).
- Buttons:** 'New terminal operation' (bottom left), 'Select action' (bottom center), 'Execute action' (bottom right).

Numbered callouts 1 through 5 point to specific elements: 1. Operation characteristics input fields, 2. Card data input fields, 3. Execute action button, 4. Select action dropdown menu, 5. New terminal operation button.

1. "Operation characteristics" input fields
2. "Card data" input fields
3. "Execute action" button
4. Drop-down "Select action" menu
5. "New terminal operation" button

"New terminal operation" button

The "New terminal operation" button is used to remove all the inputs you have made or data you have entered.

Filling in the "Operation characteristics" input field

Operation characteristics describe the type and payment method used for an operation. You can enter the following operation characteristics: Currency, amount, type of capture, reference number, merchant reference number and information about your shopping cart.

Selecting currency and amount

When you open the drop-down "Currency" menu, you will see all currencies that can be selected. You can enter the amount for the operation in the "Amount" input field.

"Amount" input field

The amount entered depends on the currency selected beforehand from the drop-down "Currency" menu. You must enter the amount in the largest currency unit using the decimal notation applicable for the currency (e.g. €10.50). Whether decimals are allowed depends on the respective currency.

Selecting the type of capture

The type of capture specifies when the payment process will be captured by the application in order to collect the authorised money.

A description of the types of capture can be found in the "Types of capture" table below.

Application Button

The button at the bottom allows you to jump to the corresponding page within the application. You must be logged in to jump to the corresponding page within the application.

 - [Entering the reference number and merchant reference number](#)
 - [Entering information about your shopping cart](#)
- [Filling in "Card data" input fields](#)
- [Creating a credit card payment or credit](#)

In this section

- [Creating a payment process \(optional\)](#)
- [Creating an operation with "Pay by link"](#)
- [Creating an operation with "Pay by link" with extended consumer information](#)
- [Creating operations using batch files](#)
- [Entering a credit card payment in the card terminal](#)
- [Entering a direct debit in the direct debit terminal](#)

If you select the type of capture "Time" from the drop-down menu listing the types of capture, the input field without a name is activated below the type of capture. The time must be entered in hours until capture (whole number, 1 to 696).

"Manual" type of capture

Please contact [Computop Helpdesk](#) if you wish to learn more about the options available for the "Manual" type of capture.

Type of capture	Select
Reference number	Select
	Manual
	Auto
	Time

Type of capture	Description
Manual	The amount is authorised (i.e. reserved), but the merchant has to capture the amount manually
Auto	The amount is authorised and captured straight away
Time	The amount is authorised and captured automatically after X hours

Entering the reference number and merchant reference number

The reference number and the merchant reference number are used for unique identification of the payment process within Computop Paygate.

The merchant reference number is used as a payment reference, which is specified in the corresponding EPA file issued by your bank.

Reference number

Please note that operations cannot be assigned or created without the input of a unique reference number (payment reference).

Computop Paygate automatically generates the merchant reference number for every operation. The merchant reference number allows you identify each operation uniquely. You only need to enter the merchant reference number if you wish to add a credit or a payment to an operation that already exists.

Entering information about your shopping cart

This is where you can enter the merchandise or services that your customer ordered from you.

"Information about your shopping cart" input field

The "Information about your shopping cart" input field must be filled in according to the rules for the payment method and the payment method provider applicable when the operation was created. The corresponding parameters in the payment methods are "OrderDesc" and "OrderDesc2".

Filling in "Card data" input fields

All of your customer's credit card data is required to create the operation correctly. You can enter the following card data: Card holder, credit card brand, card number, expiry date (MM/YYYY) and card validation code.

Entering the credit card number

Please make sure that you enter all digits in the credit card number without spaces.

Creating a credit card payment or credit

1. "Operation characteristics" input fields
2. "Card data" input fields
3. "Execute action" button
4. Drop-down "Select action" menu
5. "New terminal operation" button

Proceed as follows to create an operation (credit card payment or credit):

1. Enter the operation characteristics and the card data.

Action	Description
Initiate payment	Deduct the amount from the card data
Check account number	Check credit card number for existence. An Account Verification will be initiated where the card is verified with 0-amount.
Credit	Credit the amount to the card data

2. Select the action from the drop-down "Select action" menu.

3. Click on the "Execute action" button.

Computop Analytics verifies the values entered. If the values are invalid, a message showing the reason why will appear in red. If the values are valid, the operation (credit card payment or a credit) is created.
